

The Amazon Rainforest covers approximately 5.5 million square kilometres across nine countries, with Brazil containing about 60% of it.

It is home to more than 10% of all species on Earth, including 40,000 plant species, 3,000 fish species, and 1,300 bird species.

The Amazon River, which flows through the rainforest, is the largest river in the world by water volume and discharges 20% of all fresh water into the oceans.

Deforestation has destroyed nearly 17% of the Amazon in the last 50 years, primarily driven by cattle ranching and agricultural expansion.
